

# Installation Instructions For The Loft Bed Hammock

## **Parts List:**

Hammock with Ropes & Eyebolts

## **Mounting Instructions:**

This hammock is designed to fit the VersaLoft loft beds built by A&L Furniture Co. but it can also be used elsewhere if the proper hardware is used for mounting it securely.

To attach to a VersaLoft loft bed take the eyebolts at the ends of the ropes & insert them into the predrilled holes in the bottom of the center 2x4 braces at each end of the bed. (Make sure the nuts on the eyebolts stay turned all the way up to the eye at the end of the thread as this prevents the eyebolts from sticking out the top). Push the eyebolts up & turn into the threaded inserts, turning the rope as you turn the eyebolts in. Turn all the way up until the nuts are up against the 2x4 braces. A 1/2" wrench can be used to tighten securely if needed. NOTE: Periodically check to make sure the eyebolts are still tight and tighten if needed.
