

Assembly Instructions For The Hickory Glider Rocker

Tools Needed:

Screwgun
Phillips Head Bit
1/2" Wrench

Parts List

Seat Assembly (1)
Back Assembly (1)
Left Arm & Leg Assembly (1)
Right Arm & Leg Assembly (1)
Glider Feet (2)
1x4 Glider Braces (2)

Hardware

2" Wood Screws (2)
1-1/2" Wood Screws (16)
1-1/4" Wood Screws (6)
1" Wood Screws (4)
5/16" x 2" Hex Bolts (8)
5/16" Lock Nuts (8)
1/4" Washers (8)
Glider Hangers (4)

- Step 1** Lay the arm & leg assemblies on their back on a flat surface with the front of the arms facing up. Notice there is a right & a left. Now take the seat assembly & locate the four predrilled holes on the back seat support brace. Line them up with the four predrilled holes on the back rocker legs. Fasten with four 1-1/2" screws. Note: Make sure the front slat on the seat lays on top of the front legs before tightening. Do not overtighten any screws.
- Step 2** Line up the predrilled holes on the front seat slat with the predrilled holes on the front legs. Fasten with four 1" screws. Do not overtighten as this will split the wood.
- Step 3** Find the predrilled holes on the side of the front legs and insert a 2" screw on each side fastening the front legs to the seat assembly. Now find the predrilled holes on the side of the back legs and use two 1-1/2" screws to fasten to the seat assembly.
- Step 4** Now flip the chair over so that it rests on the front seat slat. Find the two predrilled holes on the back of the back legs below the seat and attach the back leg brace with two 1-1/2" screws. Now find the 2 short braces that are attached to the front legs beneath the seat and turn them so the predrilled holes line up with the predrilled holes on the seat support brace. Attach with two 1-1/4" screws. Do not overtighten.
- Step 5** Set the chair upright and attach the back assembly. The top back support strip is fastened to the back of the legs and the center support strip is fastened to the front of the legs and goes between the arms. Line up the top back support strip with the predrilled holes on the back legs and fasten with two 1-1/2" screws. Now line up the holes on the bottom of the back assembly with the holes on the back of the seat and attach with two 1-1/4" screws. Next take two 1-1/4" screws and attach the middle support strip to the front of the back legs in the predrilled holes.
- Step 6** Take the glider feet and set them upright on the floor to assemble the base. (The slight arch is on the bottom, the long flat edge with the cut corners is the top). Take the 1x4 braces and attach them to the 1" x 2" blocks on the inside of the glider feet. The braces go on the front & back of the blocks, flush with the top edge of the feet. (See photo below). Attach with four 1-1/2" screws in each brace in the predrilled holes. Screws are self drilling.
- Step 7** Now attach the glider hangers to the leg assemblies. Line up the hole in the hanger with the hole in the bottom of the leg assembly. Put the hanger on the inside of the leg and insert a 2" hex bolt from the inside out. Put on a 1/4" washer & a 5/16" locknut and tighten with the 1/2" wrench. Attach the other hangers the same way. Now set the glider on top of the frame. Line up the other holes in the glider hangers with the predrilled holes on the top of the glider feet. Insert a 2" hex bolt from the outside in, put on a 1/4" washer & a 5/16" locknut on each bolt and tighten.
